

## Line Crossing Services

Pipeline Safety is excited to announce the newest addition to their service lines – Line Crossing Services. With Sydney Collis heading the department, the company is confident that this cost-saving and comprehensive tracking throughout the construction phase will be highly beneficial for the clients as well as all parties involved. Foreign Line Consulting & Services is offered for all underground crossings (i.e. Power, Utilities, Fiber Optic, Private Landowners, etc.). In accordance to Industry Standards and the Code of Federal Regulations, this service works in conjunction with survey and land groups to identify lines and develop pre-construction communication and relationships to further assist in the construction assessment. This service is offered in three phases: Constructability Evaluation, Construction Monitoring, and Project Close-Out Evaluation.

### **Constructability Evaluation:**

The Pre-Construction Evaluation phase will focus on evaluating the line crossings before the bidding process begins. Line Crossings will provide all the behind the scenes information needed to begin the construction of the pipeline crossings with limited to no interruptions. It will begin with identifying the line crossings found during the survey or sweeping of the right of way. This is followed by gathering information and making contact, collecting the pipeline company's construction restriction and stipulations, negotiating encroachment agreements/Letters of No Objection and general notification. The gathered information will be inputted into our Proprietary system that will allow the clients to get an accurate estimate of the overall cost and timeliness.

### **Construction Monitoring:**

The Construction Monitoring phase will take place throughout the duration of the project. Making sure all negotiated guidelines are followed as well as rapidly assist with any unexpected lines that may not have been located through the initial sweep.

### **Project Close-Out Evaluation:**

Pipeline Safety will issue a final deliverable listing all the foreign lines located/crossed as well as where the client's line has been placed. The collected information will be placed in a file format which will coincide with the client's needs. This is a key factor in which it will be easily accessible for future use.

Pipeline Safety continues to be an industry leader by adding innovative ways to benefit our current and future clients. Pipeline Safety prides itself on being the most cost-effective solution for all of your pipeline construction needs.
